

MEASURING FOR STANDARD SILLS

LENGTH

Measure the width of the inside jamb to jamb of the window opening.

Sill-Rite Standard Sills are available in lengths of 3', 4', 5', 6' and 8'. Choose the sill length that is closest to, but not smaller than, your measurement..

EXAMPLE:

If the window opening measures $39\frac{1}{2}$ ", the smallest sill length you can use is 4' (48"). If you have two window openings of this size, you can either use two 4' sills or cut both sills out of one 8' length.

Available Sill Lengths	
FEET	INCHES
3'	36"
4'	48"
5'	60"
6'	72"
8'	96"

DEPTH

Sill-Rite Standard Sills are available in depths from 2 to 8 inches—in one-inch increments—to accommodate various wall thicknesses and window depths.

Measure the depth of the opening from the front of the window to the wall surface. Select a sill depth that is closest to that size but not smaller.

EXAMPLE:

Depth of window opening:	$3\frac{1}{2}$ "
Round up to the next full inch:	4"

A $3\frac{1}{2}$ inch opening depth requires a minimum of a 4 inch sill depth.

The front profile of the sill will overhang the opening an additional inch. So, a 4 inch deep sill will have an overall depth of 5 inches.
