

NEW @ NASH

Virtually all basements leak from the same place; where the wall and floor meet. WaterShield solves this issue by providing an unobstructed pathway for water to be channeled from the floor/footing/wall joint to any beside the footing drain system. Built-in contact points allow re-poured concrete to bear against both the wall and footing for added structural integrity. And now, exclusively available at Nash Distribution, WaterShield drain board is available in a white color that blends in seamlessly with wall panels and vapor barrier wall coverings for a clean, professional looking installation. WaterShield also has several accessories available to make installation quick and easy.

KEY BENEFITS

- Effectively channels water to drain tiles and sump pumps.
- Restores structural integrity to basement slabs.
- Will not clog!
- Clean, professional looking installation.
- Rear wall flange integrates with wall panels and vapor barriers.
- May be fastened to footing to secure.
- Made in the U.S.A.
