

Care & Maintenance

AquaWalls panels can be cleaned with a soft cloth using water and a neutral, non-abrasive detergent. Common non-abrasive bathroom cleaners can be used as well. Always test a small area first with the cleaner to ensure color fastness. For stains, avoid using solvents such as thinner or toluene, but instead use denatured alcohol.

Over time, as your silicone caulk starts to age, re-caulk joints and edges as needed. Take care when removing aged silicone so as not to damage the panels.

If you have any questions about the care and maintenance of AquaWalls, please contact us at hello@aquawalls.com
