## **Standard Sills Installation Instructions**

Make sure you read and understand these instructions before beginning your installation.

## **Tools and Materials**

- ☐Tape measure Pencil
- □Square Sandpaper
- □Jigsaw or small circular saw
- □Polyurethane construction adhesive
- ☐Weatherproof paintable caulk

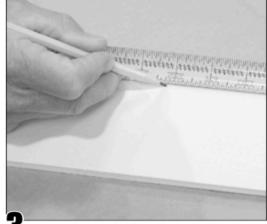

Always wear safety eye wear when operating power tools.

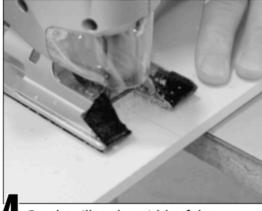

Measure the width of the window opening from jamb to jamb.

A Measure the depth of the window opening in three places (each end and the center). Note the largest of these dimensions.

Mark the width on the top of the sill.

Cut the sill to the width of the opening.

Mark the depth (the largest dimension from step 2) on the back of the sill, starting from the lip of the sill.

depth. Sand any rough edges.

Apply 1-inch balls of polyurethane construction adhesive 3 inches from each end and 6 inches on center of the sill area.

Apply a bead of caulk to the back edge of the sill.

Insert the sill at a slight angle making contact with the window, then pivot the sill down in place.

Apply a bead of caulk in the joints between the sill and the window, and the sill and the drywall. Smooth the caulk with a wet finger. Occasionally, the butt-cut ends will have voids. These voids can be filled with an all-purpose adhesive caulk.
